A BENDABLE TUBULAR ELONGATED TOY

[0001]

BACKGROUND OF THE INVENTION

This invention is directed to a bendable, tubular, [0002] elongated toy which can be shaped into different shapes for enjoyment of a delectable substance therein. The bendable, tubular, elongated toy can contain candy granules, powder, liquid or any other desired delectable foodstuff which can be removed from the tubular toy by squeezing the tubular toy or by suction by the person who desires to remove the foodstuff.

and the second of the second o [0004] Heretofore candy-type toys have been made using tubular Company of the second of the second of straws through which a liquid-type drink can be withdrawn, such as shown in U.S. Patent 3,545,980. A candy piece is secured on one end of the straw so that a solution withdrawn through the straw can mix with a portion of the candy piece as the liquid is withdrawn and the candy piece is liquified to mix with the candy.

Another type of tubular dispenser has been set forth in U.S. Patent 4,798,313 through which a frozen confection can be dispensed as the frozen confection begins to melt and can be removed from the tube by suction or by contraction of the tubular container.

and the property of the control of t Control of the Contro

[0006] Still another bendable toy holder for a candy lollipop has been set forth in U.S. Patent 5,938,153. However, there is no teaching that a delectable foodstuff be contained in the tubular parts from which the foodstuff can be withdrawn.

[0007] BRIEF SUMMARY OF THE INVENTION

5

10

15

20

[0008] An object of the invention is to provide a novel toy which has an elongated tubular body which can be bent or twisted into different shapes such as similar to an eyeglass frame including temples, or to any tubular configuration in which a delectable foodstuff can be held for consumption by a person.

[0009] Another object is to provide a tubular elongated body which contains a delectable foodstuff such as candy granules, powdered confection, or a chewy type of a delectable foodstuff including a pastry or a liquid. In order to fix the foodstuff in the elongated tubular body, each end of the tubular body is closed by any convenient reusable cap.

[0010] Other objects and benefits of the invention will be obvious to those skilled in the art upon reading the specification and viewing the drawings.

BRIEF DESCRIPTION OF THE DRAWINGS

[0012] Figure 1 illustrates a one-piece elongated tubular housing which has been bent to simulate a pair of glasses.

[0013] Figure 2 illustrates a pair of glasses, as shown in Figure 1, including a delectable food product therein.

[0014] DETAILED DESCRIPTION OF THE DRAWINGS

[011]

5

10

15

20

[0015] The drawings illustrate the use of a one-piece elongated tubular housing 10 bent to be configured as a pair of glasses including temples 12 and 14, lens holders 16 and 18 and a bridge 20. As clearly seen in the drawings, temple 12 is formed and then the tube is bent into a circular lens holder 16 with an end of the tube directed to lens holder 18 by which a bridge 20 is formed. The circular lens holder 18 is formed and then the remaining end of the tube 10 forms the temple 14.

[0016] It would be obvious to one skilled in the art that instead of simulating eyeglasses, bracelets and other jewelry can be formed. The delectable food product 22 can be added to the tube before the tube is bent to different shapes or can be added to the tube after it has been bent into a desired shape. Of course, end caps 24, 26 are placed onto the ends of the tubular elongated

housing to prevent the delectable food product from spilling from the tube.

end, the food product can be dispensed from either end. Once the delectable food product 22 has been totally dispensed from the tube, the tube can be used as an ornament or a new food product can be added for further dispensing. If all of the delectable food product has not been dispensed, the end stops can be replaced onto the ends of the tube to prevent the delectable food product from being dispensed from the tube when it is not wanted.

with the transfer program in the constant with the constant of the constant of the constant of the constant of [0018] The tube in which the delectable food product is stored is of a type which can be bent or formed into different designs including straight, curved, or circular configurations in which the was for a first the taken tube remains in the shape to which the tube has been formed. Figure 1 illustrates an elongated tube which has been formed into with a grant which is the state of the state a shape of a pair of glasses. Since the glasses formed represent and the first proper was the law, after the first the part to be over the first to the first the a pair of glasses without the lenses, the particular shape of the temples, the configuration of the lens holders, etc. do not have to The second of the western there is a tree of the be exact as in a real pair of glasses.
